

Commonwealth Utilities Corporation

Incentive Rate Overview

CPUC Briefing

May 2014

economists.com

Presentation Format

- ◆ Overview of Electric Utility Incentive Rates
- ◆ CUC Load History
- ◆ CUC Generation Capacity

Incentive Rate Overview

- ◆ Two types of electric utility incentive rates: **attract & keep**
- ◆ Incentive rates to **attract** new load referred to as Economic Development Rates
- ◆ Incentive rates to **keep** existing customers from leaving are referred to as Load Retention Rates
- ◆ At least 25 US Mainland electric utilities offer some form of Incentive Rate

Incentive Rate Overview

- ◆ Incentive rate generally some type of discount from standard rate

- ◆ Electric utilities traditionally are strong supporters of economic growth and development in their service territory
 - ❖ New factory or plant will lead to multiplier effects in electric use due to increased employment and growth from other businesses

- ◆ Often intense competition between states and electric utilities for new customers

Incentive Rate Overview

Benefits of Incentive Rates

- ◆ Benefits to utilities are increased sales from new customers and increased sales from existing customers as long as additional capacity is not required
- ◆ Benefits to community are increased employment and other direct, indirect and induced economic effects
- ◆ Benefits to government are above items and increased tax revenue

Incentive Rate Overview

- ◆ Incentive rates very common until the mid 1990's when US Mainland electric utilities during economic boom and start of deregulation
- ◆ Increasingly popular now due to recent recession and slow economic growth
- ◆ Move toward flat rates from declining block rates for large industrial customers
- ◆ Numerous supportive decisions by regulators

Incentive Rate Overview

US Mainland Electric Utilities with Incentive Rates

- ◆ Alabama Power
- ◆ Appalachian Power
- ◆ Baltimore Gas & Electric
- ◆ Duke Energy – Indiana
- ◆ Duke Energy – Florida
- ◆ El Paso Electric
- ◆ Entergy - Louisiana
- ◆ Entergy –Louisiana
- ◆ Kentucky Utilities
- ◆ City of Lompoc, CA
- ◆ Louisville G&E
- ◆ No. Indiana PSC
- ◆ Santee Cooper, SC
- ◆ City of Springfield, MO
- ◆ TVA

Incentive Rate Principles

- ◆ Other customers are not worse off
- ◆ The new load would not occur without incentive rate or existing load likely to leave
- ◆ Duration of incentive rate should be limited
- ◆ Cap on amount of load eligible for discount
- ◆ Results in a net increase in electric utility revenue

Incentive Rate Utility Requirements

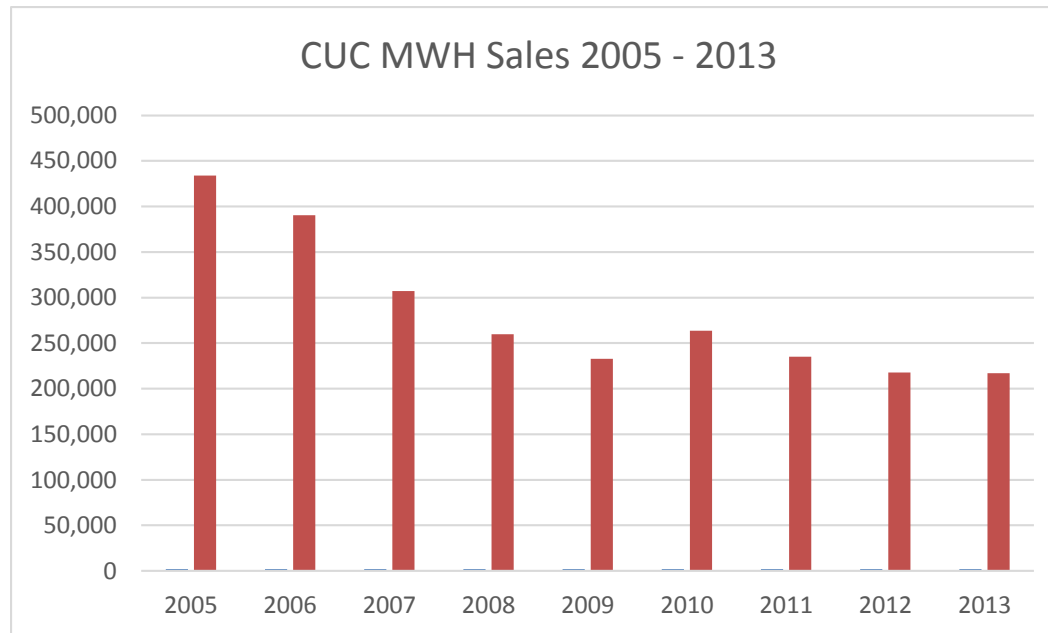

- ◆ Electric utility must demonstrate the following:
 - ❖ Other customers are not harmed
 - ❖ Revenues exceed the marginal cost of serving new load
 - ❖ Benefits to the rest of the system
 - ❖ Enough excess capacity exists to serve increased load
- ◆ Utility should also file annual reports with regulatory body showing results of incentive rate

CUC Usage History

- ◆ CUC kWh sales fell 50% since 2005

- ◆ Began with the loss of garment industry, followed by JAL pullout, recession, Japanese earthquake & loss of large commercial load

CUC Usage History

- ◆ CUC has substantial amount of excess generation capacity on Saipan - location of most self-generating customers –
- ◆ Saipan Generation Capacity – 79 MW
- ◆ Saipan Peak Load - 35 MW
- ◆ Reserve Margin - 125%
- ◆ Est. Peak Load of IR Customers 7 MW
- ◆ Reserve Margin with IR Load 88%

Incentive Rate

- ◆ CNMI could see construction of at least 8 new hotels in next 3-4 years which could consume over 75,000 -100,000 MWH annually
- ◆ Need additional staff to work at the hotels
- ◆ With increased tourism - new businesses, restaurants, staff housing, etc. Will lead to increased electric usage.

Incentive Rate Summary

- ◆ CUC must develop workable and competitive incentive rate to attract existing large-self-generating customers
- ◆ CUC must develop workable and competitive incentive rate to ensure that new hotels & other large commercial customers connect to CUC
- ◆ CUC must develop permanent workable and competitive large commercial rate to ensure that CUC **keeps** the new hotels & other large commercial customers connect to CUC
